INGRESS BIO
SCIENCE FOR SOIL

POT-SOL

(POTASSIUM SOLUBLIZING BACTERIA FOR ALL CROPS AND VEGETABLES)

Potassium is the third most important plant nutrient after Nitrogen and Phosphorus.

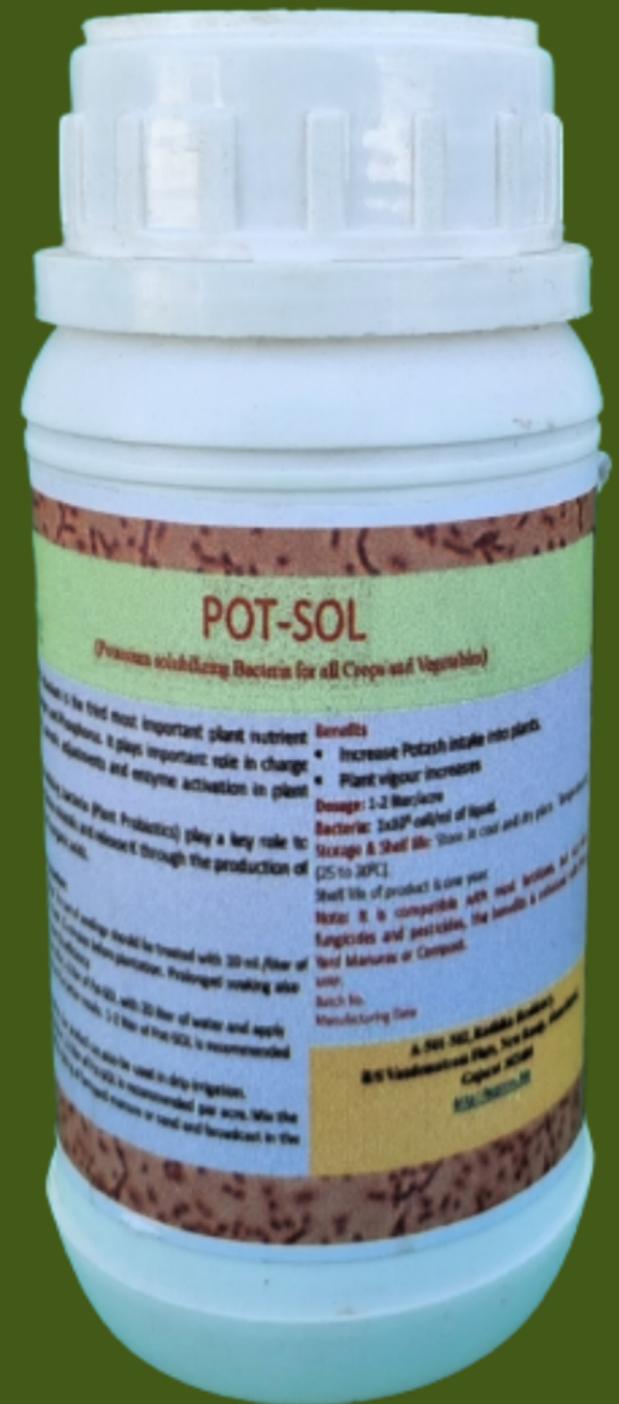

It plays important role in balancing, osmotic adjustments and enzyme activation in plant.

Dosage: 1-2 liter/acre

Potash solubilizing bacteria (Plant Probiotics) play a key role to dissolve silicate minerals and release K through the production of organic and inorganic acids.

Benifits:

- 1. Increases Potash intake into Plant.**
- 2. Increase plant vigour.**
